

**AVAILABLE SIZES**

- (A) LIGHT-LIFT-BP-72x115
- (B) LIGHT-LIFT-BP-80x130

**LIGHT-LIFT-BP LIFT**

Double hydraulic electro-hydraulic lift operated by an operator with a foldable flat platform with automatic movement. It can be installed inside vans like minivans, vans or minibuses, and allows to overcome the difference in level between the road surface and the vehicle floor, a valid aid for people with disabilities or for the normal loading and unloading of goods. The maximum lift capacity of the BP lift is 320 kg. In the event of electrical faults, a manually operated emergency system guarantees the basic operation of the lift. The lift on the road surface comes out of the vehicle of only 175 cm or 185 cm depending on the version.

**REDUCED WEIGHT**

The frame built with special high-strength steel and the walking surface made of aluminum, guarantee the structure strength and reduction of the total weight of the lifter contained in just 96 Kg. Less weight means less fuel consumption.

**ANTI-SLIP FLOOR**

The surface in contact with the walking surface in aluminum is

punched making it sturdy and non-slip, folded it does not create impediments to the view.

**MINIMUM SIZE**

When closed it has a bulk of only 35 cm, the minimum protrusion towards the outside allows its installation close to the tailgate without interfering with the bumper during its movement.

**EASY TO USE**

With 2 keys, the loading and unloading operations are performed.
