Floor Brake Lever

Floor Brake Lever FP1-20

Beautiful, elegant and easy to use!
It's a latest generation product, designed and manufactured with an optimal relationship between strength and resistance, ensuring greater and more effective braking with minimum effort. The new FP1-20 floor lever allows you to manage braking by simply pushing the lever forward.

WHAT ARE THE FEATURES THAT MAKE THIS PRODUCT UNIQUE?

- The lever has 3 push rod selection points on the brake pedal to optimize braking effort
- The knob is ergonomic and a special polyurethane was chosen as the material, which is pleasant to the touch, provides optimum grip and does not make the hand sweat.
- The rack is made of special steel with closely spaced teeth to optimize the brake lock even with small movements while braking.
- The rounded shape of the external cover allows, during use, the sliding of the knee on them, without creating continuous microtrauma to the leg.
- The device is equipped with a lever release mechanism that allows you to release the lever by placing it on seat, this facilitating driving for able-bodied people.
