Electronic ring accelerator

Electronic ring accelerator

The electronic ring accelerator can be installed on any vehicle, is compatible with standard airbags and due to its innovative design and the available finishes, it fits into all types of trimmings.

The Fadiel ring accelerator is suitable to command the accelerator through a ring placed over the steering wheel and is designed for people with limited lower limb functionality.
It is made out of composite material to ensure an extremely low weight, essential for reducing steering wheel vibration and therefore benefitting the life of the electronic components.
Reliable, manageable and extremely lightweight, it integrates perfectly with the steering wheel, making it seem like a real optional of the vehicle.
Due to the different installation configurations, it can be installed onto all cars on the market.

It is available in a carbon and burl wood finish and in black and silver.
Also available in the 2018 version with a bevelled lower part in line with the current design of the latest generation of steering wheels.

2024 NEWS
From 2024, the side-mounted steering wheel ring with quick release is available. This system allows the ring on the steering wheel to be removed and inserted in a matter of seconds. In addition, Fadiel Italiana's over steering wheel ring accelerators have also been updated and evolved to be installed in the latest generation of small steering wheels offered by many car manufacturers.
