FIXED AND RECLOSABLE TRANSFER BENCH

The fixed and reclosable transfer bench is a transport aid designed to facilitate the passage from the vehicle seat to the wheelchair, facilitating the ascent and descent from the car.

The bench is made entirely of aluminum and painted in epoxy resin with an elegant finish that adapts to every cabin. It has a very reduced thickness of 22 mm which allows installation on all cars and allows the door to be closed with the device installed and closed. It is available for the driver and for the passenger side.
