2-STAGE MOVIA RAMP

The MOVIA ramp is a transport device that facilitates access to the vehicle for people with disabilities. It can also be used for handling other vehicles and equipment such as trolleys for catering, hospital services, audio / light services, vending machines.

With the wide range of sizes available, the Movia Ramp can be installed on most vehicles.

ADVANCED TECHNOLOGY

The MOVIA ramps are built entirely of aluminum sheet without welding. Our production system allows the creation of lightweight devices with minimum footprint and weight.

The distinctive and exclusive element of the MOVIA ramps is the punching of the walking surface that generates an exceptional grip against water, snow and mud.

The MOVIA ramp is equipped with two gas pistons and two convenient handles to facilitate the opening and closing of the ramp.

On request, it is possible to have the lights that indicate the overall dimensions activated by your fitters, useful in the evening or at night.

The MOVIA ramp is fixed to the vehicle floor by means of a plate with four wing nuts that make it removable. The 2-stage MOVIA ramp is available in different sizes with a 21 cm footprint when closed.
