

Brake lever device

elegant and integrated

### Brake lever device

The manually commanded lever service brake has been designed to enable you to activate the brake pedal by using only your upper limbs. The lever has been designed and produced with an excellent ratio between strength and resistance, therefore guaranteeing better and more effective braking with minimum effort.

It is a state-of-the-art product, characterised by exclusive covers, enabling us to produce a lever with a particular and refined aesthetic finish. Moreover, with its innovative shape and exclusive design it fits into any type of vehicle.

The lever is ergonomically contoured, easing access into the driver's side, without being a hindrance: the knee can move easily in front of the lever handgrip.

It can be further equipped with a 5-button control panel to manage the light commands and original services of the vehicle.

#### Colours and finishes

It is available in a carbon and burl wood finish and in satin black, silver, pink, sky blue and beige colours.

Ergonomic knob also available in leather version with stitching of various colors from the sports design.
